

Alex Morgan

Senior Software Engineer

Contact

San Francisco, CA
+1 (555) 019-2834
alex.morgan@example.com
alexmorgan.dev
github.com/alexmorgan

Skills

- Languages:** Java, Python, Go, TypeScript, SQL
- Backend:** Spring Boot, Django, FastAPI, REST APIs
- Cloud & Data:** SAP BTP, Redis, PostgreSQL, Caching
- DevOps:** Docker, Jenkins, Git, SonarQube, CI/CD
- Architecture:** Distributed Systems, Agentic AI, Microservices

Education

M.S. in Computer Science

University of California, Berkeley
Berkeley, CA · 2022 – 2024

Focus: Distributed Systems, Cloud Computing, Advanced Algorithms

Languages

- English:** Native / Fluent
- French:** Professional (C1)
- German:** Intermediate (B1)

Hobbies

- Open-Source Contribution
- Competitive Chess
- Trail Running
- Photography

Summary

Senior Software Engineer with 6+ years of experience designing high-throughput distributed systems, cloud architectures, and resilient backend services. Proven track record in scaling mission-critical microservices, optimizing database performance, and leading cross-functional engineering teams. Passionate about clean code, developer velocity, and solving complex system challenges.

Experience

Senior Software Engineer at CloudScale Technologies

2022 – Present

San Francisco, CA

- Architected and deployed an event-driven data ingestion pipeline processing 50,000+ events per second, reducing end-to-end latency by 45%.
- Engineered a distributed multi-tier caching layer using Redis and PostgreSQL, cutting downstream database query load by 60%.
- Mentored junior and mid-level engineers, established automated CI/CD quality gates, and standardized team code review practices.

Software Engineer at DataFlow Systems

2020 – 2022

Austin, TX

- Developed resilient REST and gRPC microservices in Go and Python to support high-availability analytics for enterprise customers.
- Automated infrastructure provisioning with Terraform and Docker, accelerating feature deployment cycles from weeks to hours.

Software Engineer Intern at Nexa Solutions

2019 – 2020

Boston, MA

- Built full-stack monitoring dashboards in TypeScript and Python, improving system visibility for internal engineering teams.
- Implemented asynchronous task queues using Celery and Redis to handle batch data processing jobs reliably.

Projects

distributed-cache — In-Memory Distributed Cache

Go, Raft Consensus, Redis

github.com/example/distributed-cache

- Built a high-performance in-memory key-value store with Raft consensus for leader election and data replication.
- Implemented client-side rate limiting, LRU eviction, and configurable TTL support, handling 100k+ concurrent operations/sec.

Certifications

AWS Certified Solutions Architect — Professional

Certified

Google Cloud Professional Cloud Architect

Certified
